

Sakshi Pimpale

• [sakshpimpale](#) ✉ spimpale627@gmail.com ☎ +91 8149368281 | Pune, Maharashtra

OBJECTIVE

Aspiring Software Engineer specializing in Web Application Development with strong understanding of Python, SQL, Machine Learning and Angular. Passionate about building scalable web applications and intelligent.

SKILLS

Programming Languages: Python, SQL

AIML: NLP, Computer Vision

AIML Libraries & Framework: Numpy, Pandas

Frontend: Angular, HTML, CSS, JavaScript

Backend: Node.js, NestJS

Database: MySQL, PostgreSQL

Tools & Platforms: Git, Postman, VS Code, Figma (UI, UX Design).

Core Concepts: REST API, Responsive UI, Software Development Lifecycle (SDLC).

Soft Skills: Team Collaboration, Communication, Adaptability, Time Management.

EDUCATION

2026	B.E in Artificial Intelligence and Machine Learning, NESGI Pune.		(CGPA: 7.72)
2022	HSC, ND Kaar Jr. College, Ahilyanagar.	(82.50%)	
2020	SSC, ShriRam Vidyalaya, Ralegan.	(87.20%)	

INTERNSHIP EXPERIENCE

Angular Development Intern — RA Info Solution.

Jan 2025 – Apr 2025

- Designed and implemented a scalable contact portal with Angular, improving UI/UX.
- Built UI components using Angular architecture and reusable modules.
- Integrated RESTful APIs for authentication and user data management.

PROJECTS (PERSONAL)

1. Smart Robotics Arm-Based Vehicle Entrance Management System

Technologies: OpenCV, Robotics, OCR, Real time image processing.

- Developed a smart Vehicle entrance system using a robotic arm integrated with real-time image processing.
- Utilized OpenCV and OCR to detect vehicle number plates and automate access control.
- The system identifies vehicles, verifies authorization, and controls the robotic arm barrier automatically, improving security and reducing manual intervention.

2. Store Rating Platform | NestJS, React, PostgreSQL

GitHub: github.com/sakshpimpale/Store_Rating

- Developed a full-stack store rating platform using NestJS, React (Vite), and PostgreSQL with role-based access control for Admin, Store Owner, and Normal User roles.
- Implemented secure JWT authentication with auto-refreshing tokens, bcrypt password hashing, and backend validation pipelines using NestJS class-validator.
- Enabled users to browse stores and submit or edit 1–5 star ratings, with store owners accessing analytics dashboards showing average ratings and reviewer lists.
- Designed a normalized PostgreSQL schema with unique and range constraints, and built an admin dashboard for managing users, stores, and platform-wide metrics.

CERTIFICATIONS

- Infosys Springboard Certification. 
- Oracle Foundation Certification. 

ACHIEVEMENTS

- Published **review research paper** titled “AI Powered Robotic Arm for Higher Security Area” in a IJEDR journal.
- Selected For 2nd round of EY Techathon 6.0.
